

Servlet Demo

1. jChartsServletExamples.war

Included with the jCharts distribution is a demo Web Application: `jChartsServletExamples.war`. This is a simple demo of a couple of Servlets which create charts and stream them back to the browser.

2. Get a Servlet Container

There are many Servlet Containers you can download for free. Our preference is the excellent [Apache Tomcat](#). Go ahead and download the latest version of Tomcat and follow their installation instructions.

3. Installing the war

As you learned from the Tomcat documentation, the `webapps` folder is where the magic happens. Place the `jChartsServletExamples.war` file in this directory, and start Tomcat.

Now, open a web browser. My personal recommendation is the [Mozilla](#) browser. Point to the following address: <http://127.0.0.1:8080/jChartsServletExamples/index.html> (*127.0.0.1 is the same as 'localhost'*)

If everything works, you should see the jCharts Servlet Demo page come up. Wasn't that simple?
